Please pay attention to the supplement.

STRAHLENTHERAPIE UND ONKOLOGIE, published monthly, is a scientific journal that covers all aspects of oncology with focus on radiooncology, radiation biology and radiation physics. The articles are not only of interest to radiooncologists but to all physicians interested in oncology, to radiation biologists and radiation physicists. The journal publishes original articles, reviews and case reports that are peer-reviewed. It includes scientific short communications as well as a Journal Club with annotated articles that inform the reader on new developments in the various disciplines concerned and hence allow for a sound overview on the latest results in radiooncology research.

Founded in 1912, STRAHLTHERAPIE UND ONKOLOGIE is the oldest oncological journal in the world. Today, contributions are published in English and German. All articles have English summaries and legends. The journal is the official publication of several scientific radiooncological societies and publishes the relevant communications of these societies.
