

Contents

1	Introduction	15
1.1	General Introduction and Objectives of the Investigation	15
1.2	A Brief Survey	16
2	Background	19
2.1	Radiation Sterilization of Medical Products.....	19
	General	19
	The Importance of Radiation Sterilization	19
	Use of Plastics in Medical Applications.....	19
	The Advantages of Radiation Sterilization	20
	Sterilizing Doses.....	21
2.2	Packaging in Food Irradiation	21
	Food Irradiation	21
	The Role of Packaging	22
2.3	Low-Molecular Weight ('Volatile') Radiolysis Products of Polymers	23
	Identification of Radiolysis Products	23
	Cyclic Radiolysis Products.....	24
	Film Variety and Irradiation Conditions	24
	Quantitative Data	24
	Retention of Radiolysis Products in the Films	25
	Sensory Changes (Off Odors and Taint Transfer).....	25
2.4	Radiolysis Products of Additives	26
	Degradation of Antioxidants.....	26
	Covalent Binding of Antioxidants on Irradiation	26
	Degradation Products of Antioxidants.....	27
	Radiation-Specific / De-Alkylated Structures.....	27
	Migration of Antioxidant Degradation Products	28
2.5	Irradiation Detection.....	29
	Detection of Irradiated Food	29
	Detection of Irradiated Plastics	29
2.6	Polymer Characterization by Thermal Desorption / Dynamic Headspace Techniques.....	30
2.7	Quantitative Aspects of Thermal Desorption	31
2.8	Other Applications of Thermal Desorption	35
