

12	Summary	141
12.1	Qualitative Results with the Six Medical Polymers	141
	Radiolysis Products.....	141
	Granulates vs. Injection-Molded Parts	142
12.2	Qualitative Results with LDPE and Polypropylene Films	142
	Retention of Radiolysis Products in LDPE and Polypropylene	142
	The Effect of Desorption Temperature.....	143
	Cyclic Radiolysis Products ?.....	143
	Geometry and Efficiency of the TDS-CIS-System	143
12.3	Establishing Quantitative Desorption Conditions	144
12.4	Quantitation by 'Direct' Thermal Desorption	144
	Quantitative Results	144
	Irradiation Detection	145
	Characterizing System Performance	145
	Confirmation of the Initial Quantitative Results	145
12.5	Thermal Desorption of Polymer Solutions with Solvent Evaporation and Related Results	146
	Thermal Desorption of Polymer Solutions with Solvent Evaporation.....	146
	Radiation-Chemical Yields	146
	Direct Injection / Thermal Desorption with the CIS.....	147
	Dissolution-Precipitation	147
12.6	Identification of Trace Radiolysis Products	147
12.7	Benzene Quantitation	148
12.8	Genuine Products or Artifacts of Thermal Desorption ?	148
13	Conclusions	151
13.1	Analytical Considerations	151
13.2	Radiation-Chemical Considerations	152
13.3	Implications for Irradiation Detection	152
13.4	Safety Aspects	153
	General / Qualitative Considerations	153
	Quantitative Considerations (With Emphasis on Polystyrene).....	154
