## UV and IR Spectra of Pharmaceutical Substances

### and IR Spectra of Pharmaceutical and Cosmetic Excipients

This collection – available in an electronic version – is the continuation of the loose-leaf compilation of the "UV and IR Spectra of Some Important Drugs" published from 1978, and "IR Spectra of Pharmaceutical and Cosmetic Auxiliary Substances" published in 1987.

The CD-ROM now offers 1,552 UV and IR spectra of pharmaceutical substances as well as 121 IR spectra of pharmaceutical and cosmetic excipients. When compiling them, especially substances that can be found in the pharmacopoeias were considered.

In addition to the spectra, the documentation of the substances each contains the chemical structural formula, a table listing characteristic UV absorption data and information on the therapeutic use.

The pages presenting the individual spectra can be selected via an alphabetical list of names as well as via a therapeutic use index or a specfinder list.

With the aid of this CD-ROM version, the user is able to identify unknown substances or at least assign them. Furthermore, basic information for analytical purposes can be obtained by searching for absorption data of known drugs.

The collection of spectra is offered in English. User information is provided both in English and German.

Edited by H.-W. Dibbern,  
R. M. Müller and E. Wirbitzki  
2002. 1 CD-ROM  
ISBN 3-87193-238-8 € 380.00
