

## CONTENTS

## Cover

*Mutants of the armadillo protein p120 catenin associate with the microtubules in the cell. For further details, see the article by Clemens Franz on pages 47-51.*

## B.I.F. INTERNAL

- 2 Particulars
- 3 Geisteswissenschaften in Not
- 71 B.I.F. 2005 – facts and figures
- 73 Events, Imprint

## RESEARCH

- 5 *Alexander Meissner, Rudolf Jaenisch*  
**Epigenetic reprogramming and nuclear transfer. From frog cloning to customized human embryonic stem cells**  
*Taking stock. Although scientific progress in cloning and stem cell research has been impressive ever since the first successful nucleus transplantation in the 1950s, important questions and technical obstacles still remain. Meissner and Jaenisch recapitulate the milestones of cloning and provide a survey of current stem-cell technology.*

## SCIENCE

- 13 *Kelly LaMarco, Rebecca Ward*  
**Science nonfiction.**  
**Tips for writing a scientific manuscript**  
*Experiments are not enough. If not adequately written up, even the most important research results will not make the impact they deserve to make on science. Communicating results concisely and clearly is also a crucial skill and a professional requirement for scientists – and one that can be trained.*

## PROJECTS

- 19 Structural and functional plasticity of single hippocampal synapses • Characterization of MCAK: a microtubule-depolymerizing motor protein • Structural characterization of the mammalian signal recognition particle (SRP) system • Membrane compartmentalization in myelinated nerve • Requirement of Medi-

ator for nucleosome disassembly in transcriptional activation • Mechanisms of tonotopic organization • Insertion mechanism of  $\beta$ -barrel proteins into the mitochondrial outer membrane • Functional characterization of microRNA-containing Argonaute protein complexes • Genomic imprinting in the IC2 domain • Psoriasis susceptibility gene function *in vivo* • The mechanism of DNA repair in the bacterium *Deinococcus radiodurans* • *In-vivo* biotinylation tagging for the purification of Polycomb-repressive complexes • Elucidating the mechanisms of microRNA targeting • Identification of molecular mechanisms that play a role in nuclear assembly •

## RESULTS

- 39 *Alessandro Di Cara*  
**A novel checkpoint mechanism co-ordinating ribosome biogenesis and cell cycle**
- 43 *Harald Dürr*  
**Modulation of protein-DNA interactions**
- 47 *Clemens Franz*  
**p120 catenin associates with microtubules**
- 51 *Frauke Gräter*  
**Enforced functional protein motions studied by molecular dynamics simulations**
- 55 *Edward Lemke*  
**Probing vesicle dynamics within small synapses**
- 59 *Sarah Luke-Glaser*  
**The double-life of the substrate-specific adaptor MEL-26**
- 62 *Torsten Meissner*  
**Mechanisms regulating the nucleocytoplasmic distribution of STAT1**
- 66 *Alexander Meyer*  
**Active zones getting lazy: synaptic physiology of *bassoon* mutants**
