Cell Biology of the Hepatobiliary System

Guest Editor: Renate Fuchs, Vienna

531 Editorial: Cell Biology of the Hepatobiliary System

Renate Fuchs and Theresia Thalhammer

534 Bile canalicular secretion – tales from Vienna and Yale

James L. Boyer

539 Role of bile acid secretion in human colorectal cancer

Meinrad Peterlik

542 Lessons from the toxic bile concept for the pathogenesis and treatment of cholestatic liver diseases

Michael Trauner, Peter Fickert, Emina Halilbasic and Tarek Moustafa

549 Osmosensing and osmosignaling in the liver

Dieter Häussinger

553 Cholestasis and metabolic bone disease – a clinical review

Rudolf W. Gasser

558 Hepatic glucose production and insulin resistance

Michael Roden

562 Role of Ca²⁺-activated ion transport in the treatment of cystic fibrosis

Ákos Zsembery and Dóra Hargitai

565 Transcellular water transport in hepatobiliary secretion and role of aquaporins in liver

Wolfgang Jessner, Akos Zsembery and Jürg Graf

570 Reactive oxygen species facilitate the insulin-dependent inhibition of glucagon-induced glucose production in the isolated perfused rat liver

Jürgen Messner and Jürg Graf

575 Pancreatic stellate/myofibroblast cells express G-protein-coupled melatonin receptor 1

Sylvia Aust, Walter Jäger, Harald Kirschner, Martin Klimpfner and Theresia Thalhammer

579 Biliary secretion of fluid phase markers is modified under post-cholestatic conditions

Isabella Ellinger and Renate Fuchs

Originalarbeit

583 Influenza vaccination coverage rates in Austria in 2006/07 – a representative cross-sectional telephone survey

Patricia R. Blank, Andreas U. Freiburghaus, Matthias M. Schwenkglens, Thomas D. Szucs and Ursula Kunze
