## Cover

The universally conserved sorting signal for mitochondrial  $\beta$ -barrel proteins. For further details, see the article by Stephan Kutik on pages 53–57. (Modified from *Cell* 132, 1011–1024, 2008 by kind permission of Elsevier Science, Amsterdam, The Netherlands)

## CONTENTS

## B.I.F. INTERNAL

- 2 Particulars
- 3 Wo steht der B.I.F. 2010?
- 79 Events, Imprint

## SCIENCE

- 5 Interview with Dr. James Ogle  
Working towards the Nobel Prize  
Former B.I.F. fellow Dr. James Ogle, now a patent attorney in London, talks about the impact of his research in the laboratory of Venki Ramakrishnan, one of the winners of the 2009 Nobel Prize of Chemistry.
- 8 Ulrich E. Schaible, Albert Haas  
My home is my castle?  
Intracellular microbes can cause severe infectious diseases in humans and animals. How these pathogens enter eukaryotic cells and occupy their intracellular niches has been discussed at a B.I.F.-sponsored meeting near Hamburg, Germany.

## PROJECTS

- 13 Generation of human cellular systems harboring artificial inducible telomeres • Writing and reading histone arginine methylation during transcriptional modulation • Characterization of the molecular mechanisms of piRNA biogenesis • Synthesis of defined poly-ubiquitin chains by 'click-reaction' between artificial amino acids • Defining the *in-vivo* role of the  $\alpha_4\beta_1/\alpha_4\beta_7$  integrin–fibronectin interaction • The Fos-related Fra-2 protein in liver fibrosis and cancer • Analysis of dendritic spine plasticity with two-photon imaging and glutamate uncaging • Activation of the Mcm2-7 helicase function by ancillary replication factors GINS and Cdc45 • Regulation of anaphase promoting complex in mouse meiosis • Reg-

ulation of organelle size and number by TOR kinase • Analysis of myelin membrane growth in oligodendrocytes • Reward and punishment-mediating neurons for *Drosophila* visual memories • Synaptic targeting of kainate receptors • Molecular mechanisms of early bacterial cell division •

## RESULTS

- 37 Bijan Boldajipour  
CXCR7 controls chemokine-guided cell migration by ligand sequestration
- 42 Daniel A. Braun  
Learning and generalization of motor skills with common task structure
- 45 Barbara Cokic  
Stargazin modulates AMPA receptor antagonism
- 49 Emanuela Giacometti  
Reversal of Rett Syndrome-like symptoms in MeCP2-null mutant mice
- 52 Ulf Klein  
Subunit-specific functions of the chromosomal passenger complex (CPC)
- 55 Stephan Kutik  
Mechanism of protein insertion into the mitochondrial outer membrane
- 60 Britta Müller  
Protein degradation from the mammalian endoplasmic reticulum
- 63 Jenny Schröder  
LIMP-2 is the intracellular transporter of the lysosomal hydrolase  $\beta$ -glucocerebrosidase
- 67 Michaela Schwaiger  
Genome organization of DNA replication timing and its link to chromatin and transcription
- 71 Dea Slade  
The mechanism of DNA repair in heavily irradiated *Deinococcus radiodurans*
- 75 Ayse Yarali  
Predictive learning of pain relief in fruit flies
