

TRENDS IN FOOD SCIENCE & TECHNOLOGY

Volume 22
Issue S1

- Preface to Special Issue PathogenCombat** by Mogens Jakobsen S1
- Assessment of survival of food-borne microorganisms in the food chain by fluorescence ratio imaging microscopy** by Henrik Siegumfeldt and Nils Arneborg S3
- Novel and established intestinal cell line models – An indispensable tool in food science and nutrition** by Tomaz Langerholc, Petros A. Maragkoudakis, Jan Wollgast, Lidija Gradisnik and Avreljija Cencic S11
- Understanding the behavior of foodborne pathogens in the food chain: New information for risk assessment analysis** by Kalliopi Rantsiou, Marios Mataragas, Lene Jespersen and Luca Cocolin S21
- The challenge of merging food safety diagnostic needs with quantitative PCR platforms** by Luca Cocolin, Andreja Rajkovic, Kalliopi Rantsiou and Mieke Uyttendaele S30
- The application of transcriptomics to understand the ecological reasons of ochratoxin a biosynthesis by *Penicillium nordicum* on sodium chloride rich dry cured foods** by Markus Schmidt-Heydt, Eva Graf, Julia Batzler and Rolf Geisen S39
- Achievement V – Methods for breaking the transmission of pathogens along the food chain *Detection of viruses in food*** by Frederik Widén, Ivar Vågsholm, Sándor Belák and Shaman Muradrasoli S49
- The role of protective and probiotic cultures in food and feed and their impact in food safety** by Francesca Gaggia, Diana Di Gioia, Loredana Baffoni and Bruno Biavati S58
- A tool to diagnose context riskiness in view of food safety activities and microbiological safety output** by P.A. Luning, W.J. Marcelis, J. Rovira, M.A.J.S. van Boekel, M. Uyttendaele and L. Jacxsens S67
- Tools for the performance assessment and improvement of food safety management systems** by L. Jacxsens, P.A. Luning, W.J. Marcelis, T. van Boekel, J. Rovira, S. Oses, M. Kousta, E. Drosinos, V. Jasson and M. Uyttendaele S80
- Knowledge transfer from research to industry (SMEs) – An example from the food sector** by Susanne Braun and K. Hadwiger S90
