

<i>J. H. Bradbury and F. Lambein</i>	537–538	Konzo and neurolathyrism: Similarities and dissimilarities between these crippling neurodegenerative diseases of the poor
<i>J. H. Bradbury, J. Cliff and I. C. Denton</i>	539–542	Uptake of wetting method in Africa to reduce cyanide poisoning and konzo from cassava
<i>C.-J. Jiao, J.-L. Jiang, L.-M. Ke, W. Cheng, F.-M. Li, Z.-X. Li and C.-Y. Wang</i>	543–549	Factors affecting $\beta$ -ODAP content in <i>Lathyrus sativus</i> and their possible physiological mechanisms
<i>M. Van Moorhem, F. Lambein and L. Leybaert</i>	550–555	Unraveling the mechanism of $\beta$ -N-oxalyl- $\alpha,\beta$ -diaminopropionic acid ( $\beta$ -ODAP) induced excitotoxicity and oxidative stress, relevance for neuro-lathyrism prevention
<i>C.-J. Jiao, J.-L. Jiang, C. Li, L.-M. Ke, W. Cheng, F.-M. Li, Z.-X. Li and C.-Y. Wang</i>	556–562	$\beta$ -ODAP accumulation could be related to low levels of superoxide anion and hydrogen peroxide in <i>Lathyrus sativus</i> L.
<i>J. Llorens, C. Soler-Martín, S. Saldaña-Ruiz, B. Cutillas, S. Ambrosio and P. Boadas-Vaello</i>	563–570	A new unifying hypothesis for lathyrism, konzo and tropical ataxic neuropathy: Nitriles are the causative agents
<i>R. M. Kassa, N. L. Kasensa, V. H. Monterroso, R. J. Kayton, J. E. Klimek, L. L. David, K. R. Lunganza, K. T. Kayembe, M. Bentivoglio, S. L. Juliano and D. D. Tshala-Katumbay</i>	571–578	On the biomarkers and mechanisms of konzo, a distinct upper motor neuron disease associated with food (cassava) cyanogenic exposure
<i>I. Ciglenečki, R. Eyema, C. Kabanda, F. Taafo, H. Mekaoui and V. Urbaniak</i>	579–582	Konzo outbreak among refugees from Central African Republic in Eastern region, Cameroon
<i>R. M. Haque, Y.-H. Kuo, F. Lambein and M. Hussain</i>	583–588	Effect of environmental factors on the biosynthesis of the neuro-excitatory amino acid $\beta$ -ODAP ( $\beta$ -N-oxalyl-L- $\alpha,\beta$ -diaminopropionic acid) in callus tissue of <i>Lathyrus sativus</i>
<i>S. Kumar, G. Bejiga, S. Ahmed, H. Nakkoul and A. Sarker</i>	589–600	Genetic improvement of grass pea for low neurotoxin ( $\beta$ -ODAP) content
<i>S. Tavoletti, L. Iommarini and L. Mogliani</i>	601–606	Agronomic, qualitative ( $\beta$ -ODAP) and molecular variability in grasspea populations of the Marche region (central Italy)

(Contents continued on inside back cover)

D. B. Nyirenda, L. Chiwona-Karltun, M. Chitundu, S. Haggblade and L. Brimer	607–612	Chemical safety of cassava products in regions adopting cassava production and processing – Experience from Southern Africa
D. Diasolua Ngudi, J.-P. Baneu- Mayambu, F. Lambein and P. Kolsteren	613–619	Konzo and dietary pattern in cassava-consuming populations of Popokabaka, Democratic Republic of Congo
S. L. N. Rao	620–622	A look at the brighter facets of $\beta$ -N-oxalyl-L- $\alpha,\beta$ -diaminopropionic acid, homoarginine and the grass pea
A. Fikre, T. Negwo, Y.-H. Kuo, F. Lambein and S. Ahmed	623–630	Climatic, edaphic and altitudinal factors affecting yield and toxicity of <i>Lathyrus sativus</i> grown at five locations in Ethiopia
J. Cliff, H. Muquingue, D. Nhassico, H. Nzwalo and J. H. Bradbury	631–635	Konzo and continuing cyanide intoxication from cassava in Mozambique
K. Kusama-Eguchi, N. Yoshino, A. Minoura, K. Watanabe, T. Kusama, F. Lambein and F. Ikegami	636–643	Sulfur amino acids deficiency caused by grass pea diet plays an important role in the toxicity of L- $\beta$ -ODAP by increasing the oxidative stress: Studies on a motor neuron cell line
J. N. Chabwine, C. Masheka, Z. Balofebwami, B. Maheshe, S. Balegamire, B. Rutega, M. wa Lola, K. Mutendela, M.-J. Bonnet, O. Shangalume, J. M. Balegamire and B. Nemery	644–649	Appearance of konzo in South-Kivu, a wartorn area in the Democratic Republic of Congo
A. Mikić, V. Mihailović, B. Čupina, B. Đurić, Đ. Krstić, M. Vasić, S. Vasiljević, Đ. Karagić and V. Đorđević	650–654	Towards the re-introduction of grass pea ( <i>Lathyrus sativus</i> ) in the West Balkan Countries: The case of Serbia and Srpska (Bosnia and Herzegovina)
D. L. Dufour	655–661	Assessing diet in populations at risk for konzo and neurolathyrism
P. B. Nunn, J. R. A. Lyddiard and K. P. W. Christopher Perera	662–667	Brain glutathione as a target for aetiological factors in neurolathyrism and konzo
A. Girma, B. Tefera and L. Dadi	668–672	Grass Pea and Neurolathyrism: Farmers' perception on its consumption and protective measure in North Shewa, Ethiopia
N. L. V. Mlingi, S. Nkya, S. R. Tatala, S. Rashid and J. H. Bradbury	673–677	Recurrence of konzo in southern Tanzania: Rehabilitation and prevention using the wetting method
A. Fikre, M. Van Moorhem, S. Ahmed, F. Lambein and G. Gheysen	678–684	Studies on neurolathyrism in Ethiopia: Dietary habits, perception of risks and prevention
G. D. Kassa	685–689	The potential of biotechnology in Ethiopia: Present situation and expected development
B. Nambisan	690–693	Strategies for elimination of cyanogens from cassava for reducing toxicity and improving food safety
D. Enneking	694–709	The nutritive value of grasspea ( <i>Lathyrus sativus</i> ) and allied species, their toxicity to animals and the role of malnutrition in neurolathyrism
