

Report

Desertification and power laws S. Pueyo	305–309
--------------------------------------------	---------

Research Articles

The Pan European Ecological Network: PEEN R.H.G. Jongman, I.M. Bouwma, A. Griffioen, L. Jones-Walters and A.M. Van Doorn	311–326
-----------------------------------------------------------------------------------------------------------------------------	---------

Predicting carnivore occurrence with noninvasive surveys and occupancy modeling R.A. Long, T.M. Donovan, P. MacKay, W.J. Zielinski and J.S. Buzas	327–340
------------------------------------------------------------------------------------------------------------------------------------------------------	---------

Relative importance of management vs. design for implementation of large-scale ecological networks C.S. Bazelet and M.J. Samways	341–353
-------------------------------------------------------------------------------------------------------------------------------------	---------

Influence of landscape structure and stand age on species density and biomass of a tropical dry forest across spatial scales J.L. Hernández-Stefanoni, J.M. Dupuy, F. Tun-Dzul and F. May-Pat	355–370
--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	---------

Connectivity of agroecosystems: dispersal costs can vary among crops B.J. Cosentino, R.L. Schooley and C.A. Phillips	371–379
-------------------------------------------------------------------------------------------------------------------------	---------

Longitudinal- and transverse-scale environmental influences on riparian vegetation across multiple levels of ecological organization J. Yang, T.E. Dilts, L.A. Condon, P.L. Turner and P.J. Weisberg	381–395
---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	---------

The distribution of a threatened migratory bird species in a patchy landscape: a multi-scale analysis A.M. Schipper, K. Koffijberg, M. van Weperen, G. Atsma, A.M.J. Ragas, A.J. Hendriks and R.S.E.W. Leuven	397–410
------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	---------

The influence of species traits and q -metrics on scale-specific β -diversity components of arthropod communities of temperate forests M.M. Gossner and J. Müller	411–424
------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	---------

A multiobjective evolutionary algorithm for optimizing spatial contiguity in reserve network design X. Wu, A.T. Murray and N. Xiao	425–437
---------------------------------------------------------------------------------------------------------------------------------------	---------

Large termitaria act as refugia for tall trees, deadwood and cavity-using birds in a miombo woodland G.S. Joseph, G.S. Cumming, D.H.M. Cumming, Z. Mahlangu, R. Altwegg and C.L. Seymour	439–448
---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	---------

Book Reviews

Conserving Data in the Conservation Reserve Program L.D. Murray	449–450
--------------------------------------------------------------------	---------

Nature's matrix: linking agriculture, conservation and food sovereignty A. Prasad	451–453
--------------------------------------------------------------------------------------	---------

Boundary crossing by transregional practice of governance to address sustainability issues S. Qureshi	455–456
----------------------------------------------------------------------------------------------------------	---------
