

# Contents

**Volume 38      Number 2      2011**

*Viewpoint: Plant nutrient acquisition and utilisation in a high carbon dioxide world*

*T. R. Cavagnaro, R. M. Gleadow and R. E. Miller   87–96*

*Stressed crops emit more methane despite the mitigating effects of elevated carbon dioxide*

*Mirwais M. Qaderi and David M. Reid   97–105*

*Linking canopy temperature and trunk diameter fluctuations with other physiological water status tools for water stress management in citrus orchards*

*Iván F. García-Tejero, Víctor H. Durán-Zuazo, José L. Muriel-Fernández  
and Juan A. Jiménez-Bocanegra   106–117*

*Two measures of leaf capacitance: insights into the water transport pathway and hydraulic conductance in leaves*

*Chris J. Blackman and Tim J. Brodribb   118–126*

*Modelling phloem transport within a pruned dwarf bean: a 2-source-3-sink system*

*Michael R. Thorpe, André Lacoïnte and Peter E. H. Minchin   127–138*

*Salt-induced accumulation of glycine betaine is inhibited by high light in durum wheat*

*Petronia Carillo, Danila Parisi, Pasqualina Woodrow, Giovanni Pontecorvo,  
Giuseppina Massaro, Maria Grazia Annunziata, Amodio Fuggi and Ronan Sulpice   139–150*

*Overexpression of the MYB-related transcription factor GCC7 in *Arabidopsis thaliana* leads to increased levels of Pi and changed P-dependent gene regulation*

*Maria Lundmark, Lena Nilsson, Camilla J. Kørner and Tom H. Nielsen   151–162*

*Characterisation of HvALMT1 function in transgenic barley plants*

*Benjamin D. Gruber, Emmanuel Delhaize, Alan E. Richardson, Ute Roessner,  
Richard A. James, Susan M. Howitt and Peter R. Ryan   163–175*
