

Review

- 79 **China's bioenergy potential**
Tao Sang and Weixing Zhu

Original Researches

- 91 **Sustainability impact assessment of increasing resource use intensity in forest bioenergy production chains**
Wendelin Werhahn-Mees, Taru Palosuo, Jordi Garcia-Gonzalo, Dominik Röser and Marcus Lindner
- 107 **Indirect carbon dioxide emissions from producing bioenergy from forest harvest residues**
Anna Repo, Mikko Tuomi and Jari Liski
- 116 **Carbon budget and methane and nitrous oxide emissions over the growing season in a *Miscanthus sinensis* grassland in Tomakomai, Hokkaido, Japan**
Yo Toma, Fabián G. Fernández, Syohei Sato, Miki Izumi, Ryusuke Hatano, Toshihiko Yamada, Aya Nishiwaki, Germán Bollero and J. Ryan Stewart
- 135 **Simulated long-term effects of harvest and biomass residue removal on soil carbon and nitrogen content and productivity for two Upper Great Lakes forest ecosystems**
Scott D. Peckham and Stith T. Gower
- 148 **Mobilization of minerals and moisture loss during senescence of the energy crops *Miscanthus x giganteus*, *Arundo donax* and *Phalaris arundinacea* in Wales, UK**
R. Smith and F. M. Slater

Technical Advance

- 158 **Opportunities for avoidance of land-use change through substitution of soya bean meal and cereals in European livestock diets with bioethanol coproducts**
R. M. Weightman, B. R. Cottrill, J. J. J. Wiltshire, D. R. Kindred and R. Sylvester-Bradley

Opinion

- 171 **Efficient use of reactive nitrogen for cultivation of bioenergy: less is more**
I. Callesen, M. S. Carter and H. Østergård
