

Contents

- 2513 **Climate-driven increases in storm frequency simplify kelp forest food webs**
Jarrett E. Byrnes, Daniel C. Reed, Bradley J. Cardinale, Kyle C. Cavanaugh, Sally J. Holbrook and Russell J. Schmitt
- 2525 **The effect of elevated CO₂ on growth and competition in experimental phytoplankton communities**
Etienne Low-Décarie, Gregor F. Fussmann and Graham Bell
- 2536 **Winter and summer upwelling modes and their biological importance in the California Current Ecosystem**
Bryan A. Black, Isaac D. Schroeder, William J. Sydeman, Steven J. Bograd, Brian K. Wells and Franklin B. Schwing
- 2546 **Scale and the detection of climatic influences on the productivity of salmon populations**
Lauren A. Rogers and Daniel E. Schindler
- 2559 **Contrasting responses of *Peromyscus* mice of Yosemite National Park to recent climate change**
Dou-Shuan Yang, Chris J. Conroy and Craig Moritz
- 2567 **Mechanisms influencing changes in lake area in Alaskan boreal forest**
Jennifer Roach, Brad Griffith, Dave Verbyla and Jeremy Jones
- 2584 **The role of interannual, seasonal, and synoptic climate on the carbon isotope ratio of ecosystem respiration at a semiarid woodland**
Jee H. Shim, Heath H. Powers, Clifton W. Meyer, William T. Pockman and Nate McDowell
- 2601 **Hot spots for nitrous oxide emissions found in different types of permafrost peatlands**
M. E. Marushchak, A. Pitkämäki, H. Koponen, C. Biasi, M. Seppälä and P. J. Martikainen
- 2615 **Recovery of soil nitrogen pools in species-rich grasslands after 12 years of simulated pollutant nitrogen deposition: a 6-year experimental analysis**
Odhran S. O'sullivan, Paul Horswill, Gareth K. Phoenix, John A. Lee and Jonathan R. Leake
- 2629 **Interactive effects of drought and N fertilization on the spatial distribution of methane assimilation in grassland soils**
Petra A. Stiehl-Braun, Adrian A. Hartmann, Ellen Kandeler, Nina Buchmann and Pascal A. Niklaus
- 2640 **Soil water repellency and its implications for organic matter decomposition – is there a link to extreme climatic events?**
Marc-O. Goebel, Jörg Bachmann, Markus Reichstein, Ivan A. Janssens and Georg Guggenberger
- 2657 **Changes in soil organic carbon, nitrogen, pH and bulk density with the development of larch (*Larix gmelinii*) plantations in China**
Wang Wen-Jie, Qiu Ling, Zu Yuan-Gang, Su Dong-Xue, An Jing, Wang Hong-Yan, Zheng Guan-Yu, Sun Wei and Chen Xi-Quan
- 2677 **Disentangling stand and environmental correlates of aboveground biomass in Amazonian forests**
Christopher Baraloto, Suzanne Rabaud, Quentin Molto, Lilian Blanc, Claire Fortunel, Bruno Hérault, Nallarett Dávila, Italo Mesones, Marcos Rios, Elvis Valderrama and Paul V. A. Fine
- 2689 **An independent method of deriving the carbon dioxide fertilization effect in dry conditions using historical yield data from wet and dry years**
Justin M. McGrath and David B. Lobell
- 2697 **Effects of elevated ozone concentration on yield of four Chinese cultivars of winter wheat under fully open-air field conditions**
Xinkai Zhu, Zhaozhong Feng, Taofang Sun, Xiaocheng Liu, Haoye Tang, Jianguo Zhu, Wenshan Guo and Kazuhiko Kobayashi
- 2707 **Observed trends in winegrape maturity in Australia**
L. B. Webb, P. H. Whetton and E. W. R. Barlow
- 2720 **Revisiting projected shifts in the climate envelopes of North American trees using updated general circulation models**
Daniel W. McKenney, John H. Pedlar, Richard B. Rood and David Price
- 2731 **Hydraulic failure and tree dieback are associated with high wood density in a temperate forest under extreme drought**
William A. Hoffmann, Renée M. Marchin, Pamela Abit and On Lee Lau
- 2743 **Bryophytes attenuate anthropogenic nitrogen inputs in boreal forests**
Michael J. Gundale, Thomas H. Deluca and Annika Nordin
- 2754 **The European nitrogen cycle: commentary on Schulze *et al.*, *Global Change Biology* (2010) 16, pp. 1451–1469**
Wilfried Winiwarter, Michael Obersteiner, Keith A. Smith and Mark A. Sutton
- 2758 **Response to 'The European nitrogen cycle: response to Schulze *et al.*, *Global Change Biology* (2010) 16, pp. 1451–1469'**
E. D. Schulze, S. Luysaert and P. Ciais
- Corrigendum
- 2762 **Increases in soil organic carbon sequestration can reduce the global warming potential of long-term liming to permanent grassland**
D. A. Fornara, S. Steinbeiss, N. P. McNamara, G. Gleixner, S. Oakley, P. R. Poulton, A. J. Macdonald and R. D. Bardgett
