

## AGRONOMY SECTION

### Review

**A review on the improvement of stevia [*Stevia rebaudiana* (Bertoni)]**

A. K. Yadav, S. Singh, D. Dhyani,  
and P. S. Ahuja 1-27

### Grain

**Effet de la date de semis sur la productivité du lin oléagineux cultivé en climat frais**

D. Pageau et J. Lajeunesse 29-35

**Canaryseed (*Phalaris canariensis* L.) accessions from nineteen countries show useful genetic variation for agronomic traits**

M. Cogliatti, F. Bongiorno, H. Dalla Valle,  
and W. J. Rogers 37-48

**Quantitative trait loci analysis of seed coat color components for selective breeding in chickpea (*Cicer arietinum* L.)**

S. Hossain, J. F. Panozzo, C. Pittock, and  
R. Ford 49-55

**Morphological characterization of triticale starch granules during endosperm development and seed germination**

C.-Y. Li, W.-H. Li, B. Lee, A. Laroche,  
L.-P. Cao, and Z.-X. Lu 57-67

**Agronomic performance of barley cultivars in response to varying rates of swine slurry**

K. E. Buckley, M. C. Therrien,  
and R. M. Mohr 69-79

### Forage

**Quantitative trait loci analysis of economically important traits in *Sorghum bicolor* × *S. sudanense* hybrid**

X. Lu, J. Yun, C. Gao, and S. Acharya 81-90

**Seeding patterns and companion grasses affect total forage yield and components of binary red clover-grass mixtures**

C. Lafrenière and R. Drapeau 91-97

**Antioxidant and antileukemic properties of selected fenugreek (*Trigonella foenum-graecum* L.) genotypes grown in western Canada**

S. N. Acharya, K. Acharya, S. Paul,  
and S. K. Basu 99-105

### Molecular Biology

**Comparison of the structure and organization of the *rna* operons of *Bouteloua gracilis* and *Zea mays***

G. A. Aguado-Santacruz, D. A. Betancourt-Guerra,  
T. Siqueros-Cendón, S. Arévalo-Gallegos,  
B. E. Rivera-Chavira, G. V. Nevarez-Moorillon,  
B. Moreno-Gómez, and Q. Rascón-Cruz 107-116

### Agronomy Other

**Simulated hail damage and yield reduction in lentil**

R. A. Bueckert 117-124

**Yield stability analysis of broadly adaptive triticale germplasm in southern and central Alberta, Canada, for industrial end-use suitability**

A. Goyal, B. L. Beres, H. S. Randhawa, A. Navabi,  
D. F. Salmon, and F. Eudes 125-135

**Evaluation of mungbean accessions for the southern Canadian prairies**

M. Olson, M. Bandara, D. Jin Bing, A. Kruger,  
B. Henriquez, and E. Bremer 137-141

**Influence of isoxaflutole on colonization of corn (*Zea mays* L.) roots with arbuscular mycorrhizal fungus *Glomus intraradices***

A. Stoklosa, R. Nandanavanam, U. Puczel,  
and M. K. Upadhyaya 143-145

## HORTICULTURE SECTION

### **Review**

**Bioreactors and molecular analysis in berry crop micropropagation – A review**  
S. C. Debnath 147–157

### **Vegetable**

**Influencing factors and structural characterization of hyperhydricity of in vitro regeneration in *Brassica oleracea* var. *italica***  
Y. Yu, Y.-Q. Zhao, B. Zhao, S. Ren, and Y.-D. Guo 159–165

**Temporal variations of starch and mass in greenhouse tomato leaves under CO<sub>2</sub> enrichment**  
D. Edwards, D. Ehret, and P. Jolliffe 167–177

### **Cultivar Description**

**SPC103 (Sentennial™) sweet cherry**  
F. Kappel, R. A. MacDonald, R. T. Brownlee, and D.-L. McKenzie 179–181

## PEST MANAGEMENT SECTION

### **Plant Pathology**

**Seedling age and inoculum density affect clubroot severity and seed yield in canola**  
S. F. Hwang, H. U. Ahmed, S. E. Strelkov, B. D. Gossen, G. D. Turnbull, G. Peng, and R. J. Howard 183–190

**Identification of microsatellite markers linked to quantitative trait loci controlling resistance to *Fusarium* root rot in field pea**  
J. Feng, R. Hwang, K. F. Chang, R. L. Conner, S. F. Hwang, S. E. Strelkov, B. D. Gossen, D. L. McLaren, and A. G. Xue 199–204

**Effect and breeding potential of qSB-11<sup>LE</sup>, a sheath blight resistance quantitative trait loci from a susceptible rice cultivar**  
S. Zuo, Y. Yin, L. Zhang, Y. Zhang, Z. Chen, S. Gu, L. Zhu, and X. Pan 191–198

**Weed Science**  
**The Biology of Canadian Weeds. 145. *Muhlenbergia frondosa* (Poir.) Fernald**  
S. J. Darbyshire, A. Francis, C. W. Crompton, and C. J. Swanton 205–219

## APPLICATION OF TECHNOLOGY

**A meta-analysis of seed protein concentration QTL in soybean**  
Z. Qi, Y. Sun, Q. Wu, C. Liu, G. Hu, and Q. Chen 221–230
