

## CONTENTS

Volume 167 August 2012

- 1 The interaction rainfall vs. weight as determinant of total mercury concentration in fish from a tropical estuary**  
M. Barletta, L.R.R. Lucena, M.F. Costa, S.C.T. Barbosa-Cintra, F.J.A. Cysneiros  
*The Weibull Regression model was the most appropriate fit for T-Hg in fish and therefore more ecological insights emerged from previous data.*
- 7 The use of levoglucosan for tracing biomass burning in PM<sub>2.5</sub> samples in Tuscany (Italy)**  
M. Giannoni, T. Martellini, M. Del Bubba, A. Gambaro, R. Zangrando, M. Chiari, L. Lepri, A. Cincinelli  
*Levoglucosan, organic and elemental carbon were investigated to estimate contribution of biomass burning in Italy*
- 16 Remediation of copper in vineyards – A mini review**  
K.A. Mackie, T. Müller, E. Kandeler  
*This review is significant because it highlights prospective remediation methods usable in copper contaminated vineyards.*
- 27 Cell-wall-dependent effect of carboxyl-CdSe/ZnS quantum dots on lead and copper availability to green microalgae**  
I.A.M. Worms, J. Boltzman, M. Garcia, V.I. Slaveykova  
*Carboxyl-CdSe/ZnS quantum dots decreased Cu and Pb intracellular contents in walled algal strains, however increased them in the wall-less strain.*
- 34 Using disposable solid-phase microextraction (SPME) to determine the freely dissolved concentration of polybrominated diphenyl ethers (PBDEs) in sediments**  
F. Jia, X. Cui, W. Wang, L. Delgado-Moreno, J. Gan  
*A SPME method based on disposable PDMS fibers was developed for measuring the freely dissolved concentration of PBDEs ( $C_{free}$ ) in sediment porewater.*
- 41 Thiacloprid affects trophic interaction between gammarids and mayflies**  
D. Englert, M. Bundschuh, R. Schulz  
*Field relevant thiacloprid concentrations affect species interactions, which may translate to alterations in ecosystem functions.*
- 47 Large-Eddy Simulation of pollutant dispersion around a cubical building: Analysis of the turbulent mass transport mechanism by unsteady concentration and velocity statistics**  
P. Gousseau, B. Blocken, G.J.F. van Heijst  
*Large-Eddy Simulation is used to simulate pollutant dispersion around a cubical building and to compute statistics of concentration and velocity fluctuations, which provides physical insight into the turbulent mass transport process.*
- 58 Forest land cover continues to exacerbate freshwater acidification despite decline in sulphate emissions**  
R.W. Dunford, D.N.M. Donoghue, T.P. Burt  
*Relationships between forest land cover and freshwater pH continue to be evident despite declines in anthropogenic pollutant sulphate deposition; sea-salt scavenging may play a role.*
- 70 Physiological status and intersex in the endobenthic bivalve *Scrobicularia plana* from thirteen estuaries in northwest France**  
O.F. Tankoua, C. Amiard-Triquet, F. Denis, C. Minier, C. Mouneyrac, B. Berthet  
*Intersex in clams from estuaries, the chemical/ecological status of which was considered as good under the EC Water Framework Directive.*
- 78 Polycyclic aromatic hydrocarbons in upstream riverine runoff of the Pearl River Delta, China: An assessment of regional input sources**  
K. Zhang, B. Liang, J.-Z. Wang, Y.-F. Guan, E.Y. Zeng  
*The 15 priority PAHs are mainly generated within the PRD while the other 12 PAHs from upstream areas.*
- 85 High bacterial biodiversity increases degradation performance of hydrocarbons during bioremediation of contaminated harbor marine sediments**  
A. Dell'Anno, F. Beolchini, L. Rocchetti, G.M. Luna, R. Danovaro  
*Bioremediation strategies which can sustain high levels of bacterial diversity may significantly increase the biodegradation of hydrocarbons in contaminated marine sediments.*

## CONTENTS—Continued from outside back cover

- 93 Remediation of cadmium-contaminated soil by extraction with *para*-sulphonato-thiacalix[4]arene, a novel supramolecular receptor**  
Y. Li, X. Hu, X. Song, T. Sun  
*This is the first report on para-sulphonato-thiacalix[4]arene as an extractant for soil washing, which proved to be very efficient for Cd removal and could prevent co-dissolution of soil minerals.*
- 101 Fate of triclosan in field soils receiving sewage sludge**  
E. Butler, M.J. Whelan, R. Sakrabani, R. van Egmond  
*This paper investigates the mobility and degradation of triclosan in three field soils after receiving an application of biosolids and the persistence of methyl-triclosan.*
- 110 Increased levels of 8-hydroxy-2'-deoxyguanosine are attributable to organophosphate pesticide exposure among young children**  
G. Ding, S. Han, P. Wang, Y. Gao, R. Shi, G. Wang, Y. Tian  
*Environmental exposure to OPs may play an important role in oxidative DNA damage in children.*
- 115 Spatial variability of metal pollution in groyne fields of the Middle Elbe – Implications for sediment monitoring**  
M. Baborowski, O. Büttner, P. Morgenstern, T. Jancke, B. Westrich  
*Monitoring of contaminated river sediments must capture layers up to an anticipated erosion depth.*
- 124 Batch versus continuous feeding strategies for pharmaceutical removal by subsurface flow constructed wetland**  
D.Q. Zhang, R.M. Gersberg, J. Zhu, T. Hua, K.B.S.N. Jinadasa, S.K. Tan  
*Batch (drain and fill) feeding in mesocosm-scale constructed wetlands enhances pharmaceutical removal.*
- 132 Impacts of oil sands process water on fen plants: Implications for plant selection in required reclamation projects**  
R. Pouliot, L. Rochefort, M.D. Graf  
*Sedges and grasses tolerated the contact with oil sands process water and could probably grow well in contaminated created fens, but mosses were particularly affected under dry conditions.*
- 138 Surface-bound humic acid increased Pb<sup>2+</sup> sorption on carbon nanotubes**  
D. Lin, X. Tian, T. Li, Z. Zhang, X. He, B. Xing  
*Natural organic matter could coat on carbon nanotubes and increase their sorption of heavy metal ions.*
- 148 Quantifying the impacts of socio-economic factors on air quality in Chinese cities from 2000 to 2009**  
J. Zhao, S. Chen, H. Wang, Y. Ren, K. Du, W. Xu, H. Zheng, B. Jiang  
*Socio-economic variable groups of urbanization, pollution and environmental treatment explained 43.5% of the variance in air quality of Chinese cities.*
- 155 Polycyclic aromatic hydrocarbons (PAHs) in continental shelf sediment of China: Implications for anthropogenic influences on coastal marine environment**  
L.-Y. Liu, J.-Z. Wang, G.-L. Wei, Y.-F. Guan, E.Y. Zeng  
*Sources, compositions and spatial distributions of PAHs in continental shelf sediments off China are analyzed to estimate anthropogenic influences.*
- 163 Global gene expression in larval zebrafish (*Danio rerio*) exposed to selective serotonin reuptake inhibitors (fluoxetine and sertraline) reveals unique expression profiles and potential biomarkers of exposure**  
J.-W. Park, T.P. Heah, J.S. Gouffon, T.B. Henry, G.S. Saylor  
*Global gene expression profiles in zebrafish exposed to selective serotonin reuptake inhibitors.*
- 171 A comprehensive study of metal distribution in three main classes of seaweed**  
S. Ryan, P. McLoughlin, O. O'Donovan  
*This study, reports the most comprehensive uptake efficiencies and distributions of metals in four main seaweed sps., with *P. lanosa* demonstrating excellent bioaccumulation ability.*
- 178 Growth, development and incidence of deformities in amphibian larvae exposed as embryos to naphthenic acid concentrations detected in the Canadian oil sands region**  
S.D. Melvin, V.L. Trudeau  
*Embryonic and early-staged tadpoles exposed to concentrations of NA near those identified in Canadian waters experience inhibited growth and development.*

## Letter to the Editor

- 184 Comment on “The study of urban metabolism and its applications to urban planning and design” by Kennedy et al. (2011)**  
L. Lin, M. Liu, F. Luo, K. Wang, Q. Zhang, W.-N. Xiang

## Reply to Letter to the Editor

- 186 Reply to “Comment on “The study of urban metabolism and its applications to urban planning and design” by Kennedy et al. (2011)”**  
C. Kennedy, S. Pincetl, P. Bunje

## Response

- 187 Response to authors' reply regarding “The study of urban metabolism and its applications to urban planning and design” by Kennedy et al. (2011)**  
L. Lin, M. Liu, F. Luo, K. Wang, Q. Zhang, W.-N. Xiang
