

# CONTENTS

## RESEARCH OPINION

- A critique of current trends in the statistical analysis of seed germination and viability data** 145–159  
Sileshi, G.W.

## REVIEW PAPER

- Incidence and ecology of very fast germination** 161–167  
Parsons, R.F.

## RESEARCH PAPERS

- Water absorption and dormancy-breaking requirements of physically dormant seeds of *Schizolobium parahyba* (Fabaceae – Caesalpinioideae)** 169–176  
de Souza, T.V., Voltolini, C.H., Santos, M. & Silveira Paulilo, M.T.
- Mucilage formation in selected taxa of the genus *Artemisia* L. (Asteraceae, Anthemideae)** 177–189  
Kreitschitz, A.
- Dose–response of germinating *Rudbeckia mollis* (Asteraceae) seeds exposed to various thermal scenarios** 191–197  
Kettner, K. & Pérez, H.E.
- Germination ecology of the perennial *Centaureum somedanum*, a specialist species of mountain springs** 199–205  
Fernández-Pascual, E., Jiménez-Alfaro, B., García-Torrico, A.I., Pérez-García, F. & Díaz, T.E.
- Soil seed banks in a mature coniferous forest landscape: dominance of native perennials and low spatial variability** 207–217  
Abella, S.R. & Springer, J.D.
