

## ***Biological, Chemical and Physical Processes in Seasonally Frozen Soils***

- Preface**  
B. Cade-Menun, Y. Fouli, and M. Chantigny 397–399
- Mechanisms leading to enhanced soil nitrous oxide fluxes induced by freeze–thaw cycles**  
N. Risk, D. Snider, and C. Wagner-Riddle 401–414
- Crop residue incorporation alters soil nitrous oxide emissions during freeze–thaw cycles**  
D. E. Pelster, M. H. Chantigny, P. Rochette, D. A. Angers, J. Laganière, B. Zebarth, and C. Goyer 415–425
- Snow removal reduces annual cellulose decomposition in a riparian boreal forest**  
J. Kreyling, M. Haei, and H. Laudon 427–433
- Evaluating the potential contribution of vegetation as a nutrient source in snowmelt runoff**  
J. Elliott 435–443
- Nutrient loss from Saskatchewan cropland and pasture in spring snowmelt runoff**  
B. J. Cade-Menun, G. Bell, S. Baker Ismail, Y. Fouli, K. Hodder, D. W. McMartin, C. Perez-Valdivia, and K. Wu 445–458
- The effects of soil freeze–thaw on soil aggregate breakdown and concomitant sediment flow in Prince Edward Island: A review**  
L. M. Edwards 459–472
- Freezing cycle effects on water stability of soil aggregates**  
D. F. Dagesse 473–483
- Freeze–thaw cycles and soil water content effects on infiltration rate of three Saskatchewan soils**  
Y. Fouli, B. J. Cade-Menun, and H. W. Cutforth 485–496
- In situ measurement of snowmelt infiltration under various topsoil cap thicknesses on a reclaimed site**  
A. F. Christensen, H. He, M. F. Dyck, E. L. Turner, D. S. Chanasyk, M. A. Naeth, and C. Nichol 497–510
- Improved characterization of frozen soil processes in the Versatile Soil Moisture Budget model**  
G. A. Mohammed, M. Hayashi, C. R. Farrow, and Y. Takano 511–531
- Quantification of freeze–thaw related structure in cultivated topsoils using X-ray computer tomography**  
I. A. Taina, R. J. Heck, W. Deen, and E. Y. T. Ma 533–553
