

CONTENTS

Research articles

- Responses of grazed New Zealand hill pastures to rates of superphosphate application
MG Lambert, AD Mackay, S Ganesh and MP Upsdell 149
- Analysis of major fatty acids in milk produced from high-quality grazed pasture
I Rugoho, Y Liu and RJ Dewhurst 165
- Estimation of genetic and crossbreeding parameters of milking characteristics of grazing dairy cows
N Lopez-Villalobos, JP Edwards and JG Jago 180
- Effect of urine, potassium and dicyandiamide application on pasture production from a free-draining Canterbury dairy pasture soil
PL Carey, KC Cameron, HJ Di and AHC Roberts 192
- Sources of N₂O–N following simulated animal treading of ungrazed pastures
P Pal, TJ Clough and FM Kelliher 202
- Changes in pH, bicarbonate-extractable-P, carbon and nitrogen in soils under pasture over 7 to 27 years
RL Parfitt, BA Stevenson, C Ross and S Fraser 216
- Ammonia oxidising populations and relationships with N₂O emissions in three New Zealand soils
A Podolyan, HJ Di, KC Cameron, T Clough, C de Klein and S Saggat 228
- Short communication**
- Flaws in the current method for calculating methane emissions during dairy manure management in New Zealand
C Pratt, A Shilton, ML Chung and B Guieysse 244
