

CONTENTS

RESEARCH PAPERS

- Fluctuating temperatures terminate dormancy in *Cynara cardunculus* seeds by turning off ABA synthesis and reducing ABA signalling, but not stimulating GA synthesis or signalling**
Roberto Huarte, H., Luna, V., Pagano, E.A., Zavala, J.A. & Benech-Arnold, R.L. 79–89
- Differential RNA- and protein-expression profiles of cactus seeds capable of hydration memory**
López-Urrutia, E., Martínez-García, M., Monsalvo-Reyes, A., Salazar-Rojas, V., Montoya, R. & Campos, J.E. 91–99
- Changes in plastochromanol-8 and tocopherols during germination in Ethiopian mustard lines with contrasting tocopherol levels**
García-Navarro, E., Pérez-Vich, B. & Velasco, L. 101–112
- Seasonal changes in germination and dormancy of buried seeds of endemic Brazilian Eriocaulaceae**
Garcia, Q.S., Oliveira, P.G. & Duarte, D.M. 113–117
- Seed-coat thickness data clarifies seed size–seed-bank persistence trade-offs in *Abutilon theophrasti* (Malvaceae)**
Schutte, B.J., Davis, A.S., Peinado Jr, S.A. & Ashigh, J. 119–131
- Identification of physical dormancy and dormancy release patterns in several species (Fabaceae) of the cold desert, north-west China**
Abudureheman, B., Liu, H., Zhang, D. & Guan, K. 133–145
- Physical dormancy in *Senna multijuga* (Fabaceae: Caesalpinioideae) seeds: the role of seed structures in water uptake**
Rodrigues-Junior, A.G., Faria, J.M.R., Vaz, T.A.A., Nakamura, A.T. & José, A.C. 147–157
- ## SHORT COMMUNICATION
- Very fast germination: additional records and relationship to embryo size and phylogeny**
Parsons, R.F., Vandelook, F. & Janssens, S.B. 159–163
