SPECIAL ISSUE: SUSTAINABLE CONSUMPTION

How can sustainable consumption be promoted? The special issue presents research results to this core question explored within the focal topic *From Knowledge to Action – New Paths towards Sustainable Consumption*. They reach from a reference framework for fundamental conceptual and normative issues and viewpoints on phenomena of individual consumption to general reflections – from an outside perspective – on three paradoxes that characterize current research on sustainable consumption. Stimulating the debate on inter- and transdisciplinary approaches, the papers show directions for future research.
