

This Special Issue was partially funded by the National Science Foundation  
(grant # DEB-1541324).

We thank Guest Editor Kristina Hill for all her work on this issue.

## 459 Guest Editorial

From research to action on climate change  
*W Collins*

## 460 Reviews

With and without warning: managing ecosystems  
in a changing world  
*ML Pace, SR Carpenter, and JJ Cole* 460

Coastal infrastructure: a typology for the next century  
of adaptation to sea-level rise  
*K Hill* 468

Wastewater-effluent-dominated streams as ecosystem-  
management tools in a drier climate  
*RG Luthy, DL Sedlak, MH Plumlee, D Austin,  
and VH Resh* 477

Urban climate and adaptation strategies  
*L Larsen* 486

Integrated adaptive design for wildlife movement  
under climate change  
*N-M Lister, M Brocki, and R Ament* 493

Computer and remote-sensing infrastructure to  
enhance large-scale testing of individual-based  
forest models  
*HH Shugart, GP Asner, R Fischer, A Huth,  
N Knapp, T Le Toan, and JK Shuman* 503

Aligning restoration science and the law to sustain  
ecological infrastructure for the future  
*MA Palmer and JB Ruhl* 512

## 520 Frontiers Trading Post

Products, services, academic programs and courses,  
employment opportunities, awards, announcements,  
conferences, and meetings

## 524 Life Lines

Invasion of the SciFizoa  
*A Burton*

*Cover picture: Large-scale infrastructure projects are increasingly being proposed and implemented in response to the threats posed by climate change. Ambitious initiatives such as the Dutch Windwheel (Rotterdam, The Netherlands) – which will generate energy and provide housing and tourism-based revenue – are being designed to withstand environmental variability, including fluctuating sea levels.*
