

CONTENTS

Special Issue: Agriculture and stream water quality – future challenges for monitoring

INTRODUCTION

- 139 Agriculture and stream water quality – future challenges for monitoring
B. Kronvang and M. Bechmann

ORIGINAL ARTICLES

- 144 Use of long-term monitoring data to derive a relationship between nitrogen surplus and nitrate leaching for grassland and arable land on well-drained sandy soils in the Netherlands
D. Fraters, T. van Leeuwen, L. Boumans and J. Reijs
- 155 Background concentrations and loadings of nitrogen in Danish surface waters
B. Kronvang, J. Windolf, S.E. Larsen and J. Bøgestrand
- 164 Application of host-specific genetic markers for microbial source tracking of faecal water contamination in an agricultural catchment
L. Paruch, A.M. Paruch, A.-G. Buseth Blankenberg, M. Bechmann and T. Mæhlum
- 173 Temporal trends in phosphorus concentrations and losses from agricultural catchments in the Nordic and Baltic countries
A. Pengerud, P. Stålnacke, M. Bechmann, G. Blicher-Mathiesen, A. Iital, J. Koskiaho, K. Kyllmar, A. Lagzdins and A. Povilaitis
- 186 Arkansas Discovery Farms: documenting water quality benefits of on-farm conservation management and empowering farmers
A. Sharpley, M. Daniels, L. Berry, C. Hallmark and J. Hesselbein
- 199 Long-term trends of pesticides in Norwegian agricultural streams and potential future challenges in northern climate
M. Stenrød
- 217 The combined effects of fertilizer reduction on high risk areas and increased fertilization on low risk areas, investigated using the SWAT model for a Danish catchment
H. Thodsen, H.E. Andersen, G. Blicher-Mathiesen and D. Trolle
- 228 Effects of tile drainage repair on nutrient leaching from a field under ordinary cultivation in Sweden
I. Wesström, B. Ulén, A. Joel, G. Johansson and L. Stjernman Forsberg
