

Research Articles

- 3** *Chak-Hau Michael Tso, Yuanyuan Zha, Tian-Chyi Jim Yeh, and Jet-Chau Wen*
The relative importance of head, flux, and prior information in hydraulic tomography analysis
(doi 10.1002/2015WR017191)
- 21** *Arik M. Tashie, Benjamin B. Mirus, and Tamlin M. Pavelsky*
Identifying long-term empirical relationships between storm characteristics and episodic groundwater recharge (doi 10.1002/2015WR017876)
- 36** *Duan Chen, Arturo S. Leon, Nathan L. Gibson, and Parnian Hosseini*
Dimension reduction of decision variables for multireservoir operation: A spectral optimization model (doi 10.1002/2015WR017756)
- 52** *Marco Pilotti*
Extraction of cross sections from digital elevation model for one-dimensional dam-break wave propagation in mountain valleys (doi 10.1002/2015WR017017)
- 69** *Tero J. Niemi, Joseph H. A. Guillaume, Teemu Kokkonen, Tam M. T. Hoang, and Alan W. Seed*
Role of spatial anisotropy in design storm generation: Experiment and interpretation
(doi 10.1002/2015WR017521)
- 90** *David N. Dralle, Nathaniel J. Karst, and Sally E. Thompson*
Dry season streamflow persistence in seasonal climates (doi 10.1002/2015WR017752)
- 108** *Clara Mendoza-Lera, Laura L. Federlein, Matthias Knie, and Michael Mutz*
The algal lift: Buoyancy-mediated sediment transport (doi 10.1002/2015WR017315)
- 119** *Rui Hui, Jay R. Lund, and Kaveh Madani*
Game theory and risk-based leveed river system planning with noncooperation (doi 10.1002/2015WR017707)
- 135** *Dileep K. Panda and John Wahr*
Spatiotemporal evolution of water storage changes in India from the updated GRACE-derived gravity records (doi 10.1002/2015WR017797)
- 150** *Shmuel Assouline, Dan Li, Scott Tyler, Josef Tanny, Shabtai Cohen, Elie Bou-Zeid, Marc Parlange, and Gabriel G. Katul*
On the variability of the Priestley-Taylor coefficient over water bodies (doi 10.1002/2015WR017504)
- 164** *Jasper Oshun, William E. Dietrich, Todd E. Dawson, and Inez Fung*
Dynamic, structured heterogeneity of water isotopes inside hillslopes (doi 10.1002/2015WR017485)
- 190** *Emmanuel Arthur, Markus Tuller, Per Moldrup, and Lis W. de Jonge*
Evaluation of theoretical and empirical water vapor sorption isotherm models for soils
(doi 10.1002/2015WR017681)
- 206** *Kayla M. Christian, Laura K. Lautz, Gregory D. Hoke, Donald I. Siegel, Zunli Lu, and John Kessler*
Methane occurrence is associated with sodium-rich valley waters in domestic wells overlying the Marcellus shale in New York State (doi 10.1002/2015WR017805)
- 227** *Eliot S. Meyer, Gregory W. Characklis, Casey Brown, and Paul Moody*
Hedging the financial risk from water scarcity for Great Lakes shipping (doi 10.1002/2015WR017855)
- 246** *Kersti Haahti, Lassi Warsta, Teemu Kokkonen, Bassam A. Younis, and Harri Koivusalo*
Distributed hydrological modeling with channel network flow of a forestry drained peatland site
(doi 10.1002/2015WR018038)
- 264** *N. Schwartz, A. Carminati, and M. Javaux*
The impact of mucilage on root water uptake—A numerical study (doi 10.1002/2015WR018150)
- 278** *Yeosang Yoon, Pierre-André Garambois, Rodrigo C.D. Paiva, Michael Durand, H el ene Roux, and Edward Beighley*
Improved error estimates of a discharge algorithm for remotely sensed river measurements: Test cases on Sacramento and Garonne Rivers (doi 10.1002/2015WR017319)
- 295** *Behzad Ghanbarian and Hugh Daigle*
Thermal conductivity in porous media: Percolation-based effective-medium approximation*
(doi 10.1002/2015WR017236)
- *This article is part of a Special Section—Applications of percolation theory to porous media
- 315** *Vanessa Robins, Mohammad Saadatfar, Olaf Delgado-Friedrichs, and Adrian P. Sheppard*
Percolating length scales from topological persistence analysis of micro-CT images of porous materials*
(doi 10.1002/2015WR017937)
- *This article is part of a Special Section—Applications of percolation theory to porous media
- 330** *Matthew P. Miller, Anthony J. Tesoriero, Paul D. Capel, Brian A. Pellerin, Kenneth E. Hyer, and Douglas A. Burns*
Quantifying watershed-scale groundwater loading and in-stream fate of nitrate using high-frequency water quality data (doi 10.1002/2015WR017753)
- 348** *YoonKyung Cha, Seok Soon Park, Hye Won Lee, and Craig A. Stow*
A Bayesian hierarchical approach to model seasonal algal variability along an upstream to downstream river gradient (doi 10.1002/2015WR017327)

- 358 *Theodore J. Bohn and Enrique R. Vivoni*
Process-based characterization of evapotranspiration sources over the North American monsoon region
(doi 10.1002/2015WR017934)
- 385 *Milad Aminzadeh, Michael L. Roderick, and Dani Or*
A generalized complementary relationship between actual and potential evaporation defined by a reference surface temperature (doi 10.1002/2015WR017969)
- 407 *Stephanie K. Kampf and Michael A. Lefsky*
Transition of dominant peak flow source from snowmelt to rainfall along the Colorado Front Range: Historical patterns, trends, and lessons from the 2013 Colorado Front Range floods (doi 10.1002/2015WR017784)
- 423 *Saman Razavi and Hoshin V. Gupta*
A new framework for comprehensive, robust, and efficient global sensitivity analysis: 1. Theory*
(doi 10.1002/2015WR017558)
*Companion to *Razavi and Gupta* [2016], doi 10.1002/2015WR017559
- 440 *Saman Razavi and Hoshin V. Gupta*
A new framework for comprehensive, robust, and efficient global sensitivity analysis: 2. Application*
(doi 10.1002/2015WR017559)
*Companion to *Razavi and Gupta* [2016], doi 10.1002/2015WR017558
- 456 *Jason S. Lessels, Doerthe Tetzlaff, Christian Birkel, Jonathan Dick, and Chris Soulsby*
Water sources and mixing in riparian wetlands revealed by tracers and geospatial analysis
(doi 10.1002/2015WR017519)
- 471 *Andreas Langousis, Antonios Mamelakis, Roberto Deidda, and Marino Marrocu*
Assessing the relative effectiveness of statistical downscaling and distribution mapping in reproducing rainfall statistics based on climate model results (doi 10.1002/2015WR017556)
- 495 *Armin Pechstein, Sabine Attinger, Ronald Krieg, and Nadim K. Coptly*
Estimating transmissivity from single-well pumping tests in heterogeneous aquifers
(doi 10.1002/2015WR017845)
- 511 *Fawen Zheng, Yongshan Wan, Keunyea Song, Detong Sun, and Marion Hedgepeth*
Reconstructing input for artificial neural networks based on embedding theory and mutual information to simulate soil pore water salinity in tidal floodplain (doi 10.1002/2014WR016875)
- 533 *Haruko M. Wainwright, Adrian Flores Orozco, Matthias Bucker, Baptiste Dafflon, Jinsong Chen, Susan S. Hubbard, and Kenneth H. Williams*
Hierarchical Bayesian method for mapping biogeochemical hot spots using induced polarization imaging
(doi 10.1002/2015WR017763)
- 552 *Marco Bianchi and Chunmiao Zheng*
A lithofacies approach for modeling non-Fickian solute transport in a heterogeneous alluvial aquifer
(doi 10.1002/2015WR018186)
- 566 *Paolo Nasta and Nunzio Romano*
Use of a flux-based field capacity criterion to identify effective hydraulic parameters of layered soil profiles subjected to synthetic drainage experiments (doi 10.1002/2015WR016979)
- 585 *M. J. Martinez and M. A. Hesse*
Two-phase convective CO₂ dissolution in saline aquifers (doi 10.1002/2015WR017085)

Technical Reports: Data

- 600 *Chao Liu and Heidi Nepf*
Sediment deposition within and around a finite patch of model vegetation over a range of channel velocity
(doi 10.1002/2015WR018249)

Comment

- 613 *Amilcare Porporato and Salvatore Calabrese*
Comment on "Storage selection functions: A coherent framework for quantifying how catchments store and release water and solutes" by Rinaldo et al. (doi 10.1002/2015WR017846)

Reply

- 616 *Andrea Rinaldo, Paolo Benettin, Ciaran J. Harman, Markus Hrachowitz, Kevin J. McGuire, Ype van der Velde, Enrico Bertuzzo, and Gianluca Botter*
Reply to comment by Porporato and Calabrese on "Storage selection functions: A coherent framework for quantifying how catchments store and release water and solutes" (doi 10.1002/2015WR018045)
