Interfaces du sol pour un développement durable

Introduction / Introduction

Occurrence and species richness of mycorrhizal fungi in soil under different land use

Soil fertility and fertilization practices affect accumulation and leaching risk of reactive N in greenhouse vegetable soils

Mechanisms for altering phosphorus sorption characteristics induced by low-molecular-weight organic acids

Heavy metal concentration in soil in the tailing dam vicinity of an old gold mine in Johannesburg, South Africa

Evidence of a union between organic carbon and water content in soil

DRIFT spectroscopy combined with sodium hypochlorite oxidation reveals different organic matter characteristics in density-size fractions of organically managed soils

Contents (concluded) / Table de matières (suite et fin)

Dinesh Panday and Nsalambi V. Nkongolo	328–335	Comparison of models for predicting pore space indices and their relationships with CO ₂ and N ₂ O fluxes in a corn–soybean field
Doug Hayhoe, Jane MacIntyre, and Shawn Bullock	336–345	Soil science education for Grades K–12 in Canada
