

## CONTENTS Volume 12, Number 2, 2017

- 205** The integrated renovation of high-rise hotels on the Spanish Mediterranean coast  
*V. Echarri et al.*
- 217** The inclusion of natural elements in building design: the role of green rating systems  
*I. Oberti & F. Plantamura*
- 227** Resilient communities. Social infrastructures for sustainable growth of urban areas.  
A case study  
*A. Boeri et al.*
- 238** Formulating a capability approach based model to sustain rural sub-Saharan African  
inhabitant's self-reliance towards their built environment  
*M. Smits*
- 252** New Zealand's building performance pathways  
*R. Greenan & B. Muir*
- 264** Computational analysis of the energy efficiency of stone walls:  
current situation and possible improvements  
*Jiří Maděra et al.*
- 273** Mathematical model applied to improve the natural lighting design  
*B. García-Fernández et al.*
- 283** Effect of slope angle on energy performance of ground-integrated buildings on  
slope terrain  
*M. de Castro & M.B. Gadi*
- 294** A characterisation and evaluation of urban areas from an energy efficiency approach,  
using geographic information systems in combination with life cycle assessment  
methodology  
*S. García-Pérez et al.*
- 304** A perspective on the development of sustainable construction products:  
an eco-design approach  
*B. Marques et al.*
- 315** Numerical and experimental evaluation of the drying behaviour of medium density  
expanded cork boards used as an external coating  
*R. Fino et al.*
- 326** Lightweight gypsum based materials: methods of preparation and utilization  
*Magdalena Doleželová et al.*
- 336** Characterization of fine-grained ceramic material for environmental-friendly applications  
in the building sector  
*Miloš Jerman et al.*
- 342** Monitoring the damage of exterior renders caused by the environment  
*Monika Čáchová et al.*
