### **Special Issue: Modeling crops from genotype to phenotype in a changing climate**

**Guest Editors: Pierre Martre, Xinyou Yin and Frank Ewert**

Modeling crops from genotype to phenotype in a changing climate

Pierre Martre, Xinyou Yin and Frank Ewert (France, The Netherlands, Germany)

1

### **Improving crop growth models to account for climate change impact**

Crop model improvement reduces the uncertainty of the response to temperature of multi-model ensembles

A. Maiorano, P. Martre, S. Asseng, F. Ewert, C. Müller, R.P. Rötter, A.C. Ruane, M.A. Semenov, D. Wallach, E. Wang, P.D. Alderman, B.T. Kassie, C. Biernath, B. Basso, D. Cammarano, A.J. Challinor, J. Doltra, B. Dumont, E.E. Rezaei, S. Gayler, K.C. Kersebaum, B.A. Kimball, A.-K. Koehler, B. Liu, G.J. O'Leary, J.E. Olesen, M.J. Ottman, E. Priesack, M. Reynolds, P. Stratonovitch, T. Streck, P.J. Thorburn, K. Waha, G.W. Wall, J.W. White, Z. Zhao and Y. Zhu (France, USA, Germany, Finland, UK, Australia, Mexico, Colombia, Spain, China, Denmark)

5

Canopy temperature for simulation of heat stress in irrigated wheat in a semi-arid environment: A multi-model comparison

H. Webber, P. Martre, S. Asseng, B. Kimball, J. White, M. Ottman, G.W. Wall, G. De Sanctis, J. Doltra, R. Grant, B. Kassie, A. Maiorano, J.E. Olesen, D. Ripoche, E.E. Rezaei, M.A. Semenov, P. Stratonovitch and F. Ewert (Germany, France, USA, Italy, Spain, Canada, Denmark, UK)

21

Quantifying source-sink relationships of rice under high night-time temperature combined with two nitrogen levels

W. Shi, G. Xiao, P.C. Struik, K.S.V. Jagadish and X. Yin (The Netherlands, Philippines)

36

Simulating the impact of source-sink manipulations in wheat

S. Asseng, B.T. Kassie, M.H. Labra, C. Amador and D.F. Calderini (USA, Chile)

47

Performance of the SUBSTOR-potato model across contrasting growing conditions

R. Raymundo, S. Asseng, R. Prasad, U. Kleinwechter, J. Concha, B. Condori, W. Bowen, J. Wolf, J.E. Olesen, Q. Dong, L. Zotarelli, M. Gastelo, A. Alva, M. Travasso, R. Quiroz, V. Arora, W. Graham and C. Porter (USA, Austria, Peru, The Netherlands, Denmark, China, Argentina, India)

57

### **Modeling the response of genotypes to the environment**

Multi-scale modelling to synergise Plant Systems Biology and Crop Science

Y.H. Chew, D.D. Seaton and A.J. Millar (UK)

77

Combining genome-wide prediction and a phenology model to simulate heading date in spring barley

R. Uptmoor, K. Pillen and C. Matuschewski (Germany)

84

Analysis and simulation of phenotypic plasticity for traits contributing to yield potential in twelve rice genotypes

U. Kumar, Ma.R. Laza, J.-C. Soulié, R. Pasco, K.V.S. Mendez and M. Dingkuhn (Philippines, France)

94

Bridging the gap between ideotype and genotype: Challenges and prospects for modelling as exemplified by the case of adapting wheat ( <i>Triticum aestivum</i> L.) phenology to climate change in France	
D. Gouache, M. Bogard, M. Pegard, S. Thepot, C. Garcia, D. Hourcade, E. Paux, F.-X. Oury, M. Rousset, J.-C. Deswarte and X. Le Bris (France)	108
Baseline simulation for global wheat production with CIMMYT mega-environment specific cultivars	
S. Gbegbelegbe, D. Cammarano, S. Asseng, R. Robertson, U. Chung, M. Adam, O. Abdalla, T. Payne, M. Reynolds, K. Sonder, B. Shiferaw and G. Nelson (Mexico, UK, USA, Kenya, Korea, Burkina Faso, Lebanon)	122
<b>Modelling the impact of climate change on grains and seeds quality</b>	
Models of grain quality in wheat—A review	
J.G. Nuttall, G.J. O'Leary, J.F. Panozzo, C.K. Walker, K.M. Barlow and G.J. Fitzgerald (Australia)	136
Fatty acid composition of high oleic sunflower hybrids in a changing environment	
P. Angeloni, M.M. Echarte, G. Pereyra Irujo, N. Izquierdo and L. Aguirrezábal (Argentina)	146
