

## Contents

**Changes in bacterial community composition and soil respiration indicate rapid successions of protist grazers during mineralization of maize crop residues**

Maike Hünninghaus, Robert Koller, Susanne Kramer, Sven Marhan, Ellen Kandeler, Michael Bonkowski

**Contrasting effect of elevated atmospheric CO<sub>2</sub> on the C/N ratio of faba bean and spring wheat residues exert only minor changes in the abundance and enzyme activities of soil proteolytic bacteria**

Frank Rasche, Susanne Kramer, Esther Enowashu, Katie Mackie, Petra Högy, Sven Marhan

**Resource driven community dynamics of NH<sub>4</sub><sup>+</sup> assimilating and N<sub>2</sub>O reducing archaea in a temperate paddy soil**

Maria Alexandra Cucu, Sven Marhan, Daniel Said-Pullicino, Luisella Celi, Ellen Kandeler, Frank Rasche

**Diversity and distribution of soil micro-invertebrates across an altitudinal gradient in a tropical montane rainforest of Ecuador, with focus on free-living nematodes**

Walter Traunspurger, Nicola Reiff, Valentyna Krashevskaya, Nabil Majdi, Stefan Scheu

**Grass dominance drives rhizospheric bacterial communities in a desertic shrub and grassy steppe highland**

Eugenia Menoyo, Mónica Alejandra Lugo, François Philippe Teste, Marcela Alejandra Ferrero

1 **Influence of earthworm abundance and diversity on soil structure and the implications for soil services throughout the season**

N.L. Schon, A.D. Mackay, R.A. Gray, C. van Koten, M.B. Dodd

9 **Imbalanced carbon-for-phosphorus exchange between European arbuscular mycorrhizal fungi and non-native *Panicum* grasses—A case of dysfunctional symbiosis**

Veronika Řezáčová, Renata Slavíková, Tereza Konvalinková, Martina Hujslová, Hana Gryndlerová, Milan Gryndler, David Püschel, Jan Jansa
