

Journal of Apicultural Research

Volume 57 Number 5 2018

Contents

Ecology and conservation

Assessment of the response of pollinator abundance to environmental pressures using structured expert elicitation

Martine J. Barons, Anca M. Hanea, Sophia K. Wright, Katherine C. R. Baldock, Lena Wilfert, David Chandler, Samik Datta, Jessica Fannon, Chris Hartfield, Andrew Lucas, Jeff Ollerton, Simon G. Potts and Norman L. Carreck

593

Evolution, phylogeny, and biogeography

Automatic determination of landmark coordinates for honey bee forewing venation using a new MATLAB-based tool

Enresto Ángel-Beamonte, Pablo Martín-Ramos, Pilar Santolaria, Ester Sales, Javier Abizanda and Jesús L Yáñez

605

Genetics and breeding

An update of Africanization in honey bee (*Apis mellifera*) populations in Buenos Aires, Argentina

María L. Genchi García, Francisco José Reynaldi and Claudio Marcelo Bravi

611

Hive product science

Long-term changes in naturally produced honey depending on processing and temperature

Jens Radtke and Birgit Lichtenberg-Kraag

615

Evaluation of Turkish propolis for its chemical composition, antioxidant capacity, anti-proliferative effect on several human breast cancer cell lines and proliferative effect on fibroblasts and mouse mesenchymal stem cell line

Tugba Ozdal, Gulce Sari-Kaplan, Ergul Mutlu-Altundag, Dilek Boyacioglu and Esra Capanoglu

627

Chemical composition of Italian propolis of different ecoregional origin

Silvia Gardini, Davide Bertelli, Lucia Marchetti, Riccardo Graziosi, Diego Pinetti, Maria Plessi and Gian Luigi Marcazzan

639

Determination and quantification of phenolic acids in raw propolis by reversed phase high performance liquid chromatography. Feasibility study for the use of near infrared spectroscopy

Ana María Vivar-Quintana, María Inmaculada González-Martín, Isabel Revilla and Eddy Valentín Betances-Salcedo

648

Pathology and parasitology

Trends in beekeeping and honey bee colony losses in Latin America

Fabrice Requier, Karina Antúnez, Carolina L Morales, Patricia Aldea Sánchez, Dayson Castilhos, Paula M Garrido, Agostina Giacobino, Francisco J Reynaldi, Juan Manuel Rosso Londoño, Estela Santos and Lucas A Garibaldi

657

Bioassays to quantify hygienic behavior in honey bee (<i>Apis mellifera</i> L.) colonies: a review Gil Leclercq, Frédéric Francis, Nicolas Gengler and Tjeerd Blacquièrè	663
The condition of honey bee colonies (<i>Apis mellifera</i>) treated for <i>Varroa destructor</i> by different methods Beata Bąk, Jerzy Wilde and Maciej Siuda	674
Physiology, biochemistry, and chemical ecology Supplemental carbohydrates influence abiotic stress resistance in honey bees Christina L Mogren, Joseph Margotta, Robert G Danka and Kristen Healy	682
Sociobiology and behaviour For what purpose do worker bees of <i>Apis dorsata</i> colonies construct and use wax specks? Jerzy Woyke	690
Toxicology Chemical residues in beebread, honey, pollen and wax samples collected from bee hives placed on canola crops in Western Australia Rob Manning	696
Identifying regions of risk to honey bees from Zika vector control in the USA Lewis J Bartlett, Colin J Carlson and Mike Boots	709
