

Research articles

Performance of five pasture-based dairy systems with increasing levels of nitrogen fertiliser and associated stocking rates
M. V. H. Staines, R. J. Morris, M. D. A. Bolland and R. P. McDonnell 1

Epichloë fungal endophyte colonisation and seed quality in developing grass florets – effect of different fertiliser applications
M. Wang, C. R. McGill, R. C. Southward, X. Z. He, S. D. Card and M. P. Rolston 27

Factors that influence the survival of dairy cows milked once a day
J. F. Rocha, N. Lopez-Villalobos, J. L. Burke, N. W. Sneddon and D. J. Donaghy 42

Time of shearing the ewe not only affects lamb live weight and survival at birth and weaning, but also ewe wool production and quality
I. De Barbieri, F. Montossi, C. Viñoles and P. R. Kenyon 57

The performance of single-rearing ewes and their lambs offered ryegrass pasture or herb–clover mix during lactation
R. A. Corner-Thomas, L. M. Cranston, P. D. Kemp, S. T. Morris and P. R. Kenyon 67

Genetic evaluation of dairy sheep in a New Zealand flock
M. R. Scholtens, S. Peterson, K. Gunson, A. Gunson and N. Lopez-Villalobos 81

Genotype-by-milking frequency interaction for milk production traits in New Zealand
F. Lembeye, N. López-Villalobos, J. L. Burke and S. R. Davis 92

Short communications

Behaviour of cows fed a total mixed ration with different access time to fresh forage
A. Mendoza, C. Cajarville and J. L. Repetto 102

Characterising the volumes and chemical characteristics of dairy sheep effluent in New Zealand
L. C. Smith, R. D. Longhurst, R. M. Monaghan and N. Bartlett 109
