

Canadian Journal of **Soil Science**

Note of appreciation

iii–iv Note of appreciation

Articles

- | | | |
|-------|---|---|
| 1–14 | On-farm spatial characterization of soil mineral nitrogen, crop growth, and yield of canola as affected by different rates of nitrogen application | A. Herath, B.L. Ma, J. Shang, J. Liu, T. Dong, X. Jiao, J.M. Kovacs, and D. Walters |
| 15–23 | Different mechanisms of organic and inorganic phosphorus release from Mollisols induced by low molecular weight organic acids | Yongzhuang Wang, Xin Chen, Caiyan Lu, Bin Huang, and Yi Shi |
| 27–44 | A bioassay of nitrogen availability in soils amended with manure from cattle fed dried distiller grains with solubles: effects of construction and demolition waste and peat moss | Ikechukwu Agomoh, Francis Zvomuya, Xiyang Hao, and Tim A. McAllister |
| 45–54 | Evaluation of a logarithmic solution to the convection–dispersion equation obtained from boundary-layer theory | Jiao Wang, Hengying Ji, and Ming'an Shao |
| 55–69 | Determining sources of fine-grained sediment for a reach of the Lower Little Bow River, Alberta, using a colour-based sediment fingerprinting approach | Kui Liu, David A. Lobb, Jim J. Miller, Philip N. Owens, and Melody E.G. Caron |
| 70–76 | Responses of soil respiration to warming vary between growing season and non-growing season in a mountain forest of southwestern China | Zhenfeng Xu, Huajun Yin, Chunzhang Zhao, Pei Xiong, and Qing-Liu |

77–90	Infrared spectroscopy prediction of organic carbon and total nitrogen in soil and particulate organic matter from diverse Canadian agricultural regions	Lei Zhang, Xueming Yang, Craig Drury, Martin Chantigny, Edward Gregorich, Jim Miller, Shabtai Bittman, Dan Reynolds, and Jingyi Yang
91–102	Changes in soil organic carbon concentration, chemical composition, and aggregate stability as influenced by tillage systems in the semi-arid and semi-humid area of North China	Zhangliu Du, Xue Han, Yanqun Wang, Runsheng Gu, Yingchun Li, Dongyan Wang, Anping Yun, and Liping Guo
103–113	Flooding-induced mobilization of potentially toxic trace elements from uncontaminated, calcareous agricultural soils	S.P. Indraratne and D. Kumaragamage
114–127	Soil and seedling response to dehydrated septic tank sludge versus forest floor additions at a disturbed site	Lili Perreault, Suzanne Brais, Nicolas Bélanger, and Sylvie Quideau
128–135	Kinetics and thermodynamics of phosphorus sorption on goethites: effects of biochar application	Fernanda G. Pereira, Inoka D. Amarakoon, Francis Zvomuya, and Nicholson N. Jeke
136–147	Grazing altered carbon exchange in a dry mixed-grass prairie as a function of soil texture	Ben W. Thomas, Xinlei Gao, Mengli Zhao, Edward W. Bork, and Xiying Hao
148–160	Impact of manure storage conditions and time on decomposition of and losses from liquid dairy manure stored in a temperate climate	Gudmundur H. Johannesson, John Lauzon, Anna Crolla, Brandon Gilroyed, Andrew Vanderzaag, and Robert Gordon
161–174	Spatiotemporal characteristics and temporal stability of soil water in an alpine meadow on the northern Tibetan Plateau	Xuchao Zhu, Ming'an Shao, and Yin Liang

Short communication

175–179	Prediction of total carbon, total nitrogen, and pH of organic materials using visible near-infrared reflectance spectroscopy	Mervin St. Luce, Noura Ziadi, Bernard Gagnon, and Vicky Lévesque
