

Environmental Science Water Research & Technology

EDITORIALS

1033

Editorial Perspectives: could water fingerprinting help with community-wide health assessment?

Barbara Kasprzyk-Hordern

1036

Outstanding Reviewers for *Environmental Science: Water Research & Technology* in 2018

1037

Periodic symmetry defined bioreactors enhance algae growth

Yen-Hsun Tseng, Tyler I. Lee, Samuel J. Doane, Anthony E. Butterfield, John D. McLennan, Swomitra K. Mohanty and Leonard F. Pease III*

1046

Cocatalyst or substrate? Competitive Fenton transformation of cysteine and salicylic acid

Daojian Tang, Guishui Zhang, Fengxia Chen and Jiahai Ma*

1054

Converting eggplant biomass into multifunctional porous carbon electrodes for self-powered capacitive deionization

Cuijiao Zhao, Shengbo Zhang, Na Sun, Hongjian Zhou,* Guozhong Wang, Yunxia Zhang, Haimin Zhang* and Huijun Zhao

1064

Natural organic activator quercetin for persulfate oxidative degradation of halogenated hydrocarbons

Ya-Ting Lin, Yu-Ting Chiu, Chiya Ciou and Chenju Liang*

1072

Long-term performance evaluation of an anoxic sulfur oxidizing moving bed biofilm reactor under nitrate limited conditions

Ramita Khanongnuch,* Francesco Di Capua, Aino-Maija Lakaniemi, Eldon R. Rene and Piet N. L. Lens

1082

Evaluation of the novel substrate RUG™ for the detection of *Escherichia coli* in water from temperate (Zurich, Switzerland) and tropical (Bushenyi, Uganda) field sites

Franziska Genter, Sara J. Marks, Guillaume Clair-Caliot, Deo S. Mugume, Richard B. Johnston, Robert E. S. Bain and Timothy R. Julian*

1092

Quantitative proteomics for monitoring microbial dynamics in activated sludge from landfill leachate treatment

Christoph Steiner,* Hendrik Nolte, Asma Azizan, Markus Krüger, Martin Denecke and Astrid Rehorek

1102

Enhancing the stability and efficiency of the anammox process in plug-flow integrated fixed-film activated sludge (IFAS) reactors through alternating anoxic/aerobic (A³) conditions

Chao Liu, Wenlong Liu, Lei Wu and Yongzhen Peng*

1113

H₂O₂/periodate (IO₄⁻): a novel advanced oxidation technology for the degradation of refractory organic pollutants

Nor Elhouda Chadi, Slimane Merouani,*
Oualid Hamdaoui, Mohammed Bouhelassa
and Muthupandian Ashokkumar

1124

High-rate stabilization of primary sludge in a single-chamber microbial hydrogen peroxide producing cell

Dongwon Ki, Rick Kupferer III and César I. Torres*

1132

Adsorption of organic micropollutants to biosolids-derived biochar: estimation of thermodynamic parameters

Yiran Tong, Brooke K. Mayer and Patrick J. McNamara*

1145

Effect of ultrafiltration membrane material on fouling dynamics in a submerged anaerobic membrane bioreactor treating domestic wastewater

Amit Dan Grossman, Yang Yang, Uri Yogev,
Daniela Calero Camarena, Gideon Oron
and Roy Bernstein*

1157

Green infrastructure optimization to achieve pre-development conditions of a semiarid urban catchment

Hessam E. Tavakol-Davani,* Hassan Tavakol-Davani, Steven J. Burian, Brian J. McPherson and Michael E. Barber

1172

On the electrical operation of batch electro dialysis for reduced energy consumption

Karim M. Chehayeb and John H. Lienhard V*

1183

Meso and micro-scale effects of loading and air scouring on nitrifying bio-cord biofilm

Xin Tian and Robert Delatolla*
