### **GROUNDWATER MONITORING STUDIES**

- S1** Conducting groundwater monitoring studies in Europe for pesticide active substances and their metabolites in the context of Regulation (EC) 1107/2009  
*Anne Louise Gimsing, Jutta Agert, Nicole Baran, Arnaud Boivin, Federico Ferrari, Richard Gibson, Lisa Hammond, Florian Hegler, Russell L. Jones, Wolfram König, Jenny Kreuger, Ton van der Linden, Dirk Liss, Ludovic Loiseau, Andy Massey, Benedict Miles, Laurent Monrozier, Andy Newcombe, Anton Poot, Graham L. Reeves, Stefan Reichenberger, Annette E. Rosenbom, Horst Staudenmaier, Robin Sur, Andreas Schwen, Michael Stemmer, Wiebke Tüting and Uta Ulrich*

## Table of Contents

1	Introduction.....	3	5	Data quality considerations.....	41
2	Use of monitoring data as a function of various exposure assessment options.....	6	5.1	Good laboratory practice.....	41
2.1	Exposure assessment option 1.....	8	5.2	General study quality criteria.....	41
2.2	Exposure assessment option 2.....	10	5.3	Installation of monitoring wells.....	42
2.3	Exposure assessment option 3.....	11	5.4	Sampling lances.....	43
2.4	Exposure assessment option 4.....	11	5.5	Selection of existing monitoring wells.....	43
2.5	Exposure assessment option 5.....	11	5.6	Collection of samples.....	44
2.6	Exposure assessment option 6.....	12	5.6.1	Preventing sample contamination.....	44
2.7	Exposure assessment option 7.....	12	5.6.2	Sampling materials and containers.....	45
2.8	Conclusion.....	13	5.6.3	Water removal.....	45
3	Representative study designs.....	13	5.6.4	Amount of purging.....	46
3.1	In-field study designs for exposure assessment options 1, 2, 3, and 4.....	14	5.6.5	Sample collection.....	46
3.1.1	General study outline.....	14	5.6.6	Sample transport and storage.....	46
3.1.2	Variation in study design among exposure assessment options 1, 2, 3, and 4.....	16	5.6.7	Sampling other types of wells.....	46
3.2	Edge-of-field study designs for exposure assessment options 1, 2, 3, and 4.....	17	5.7	Sample analysis.....	46
3.2.1	General study outline.....	17	5.8	Outliers.....	47
3.2.2	Variation in study design between exposure assessment options 1, 2, 3, and 4.....	18	5.9	Further hydrogeological characterisation.....	47
3.3	Catchment and aquifer designs for exposure assessment options 1, 2, 3, and 4.....	18	5.9.1	Tracers.....	47
3.4	Study designs for exposure assessment option 5.....	21	5.9.2	Geophysics.....	48
3.5	Study designs for exposure assessment options 6 and 7.....	22	6	Reporting.....	49
4	Groundwater vulnerability assessment and mapping.....	22	6.1	Assessing groundwater monitoring data.....	49
4.1	Groundwater vulnerability concepts.....	23	6.1.1	General considerations.....	49
4.1.1	Intrinsic/environmental vulnerability.....	23	6.1.2	Assessment of monitoring data as a function of the exposure assessment option.....	50
4.1.2	Specific vulnerability.....	24	6.2	Report outline and content.....	51
4.2	Vulnerability mapping approaches.....	24	6.2.1	Summary.....	51
4.2.1	Scope of vulnerability assessment and mapping.....	25	6.2.2	Introduction.....	51
4.2.2	Factors determining groundwater vulnerability.....	25	6.2.3	Sites.....	51
4.2.3	Different vulnerability mapping approaches.....	25	6.2.4	Sampling and sample analyses.....	52
4.2.4	General considerations on vulnerability mapping.....	27	6.2.5	Presentation of the results.....	52
4.2.5	Spatial data considerations.....	29	6.2.6	Discussion and conclusions.....	52
4.2.6	Technical considerations.....	29	6.2.7	Appendices.....	53
4.2.7	Geoinformation sources.....	30	7	Public monitoring data collected by third party organisations.....	53
4.3	Application of vulnerability assessment and mapping.....	31	7.1	Different sources, objectives, and representativeness of publicly available monitoring data.....	53
4.3.1	Monitoring site characterisation and vulnerability assessment.....	31	7.2	Other factors influencing the quality of data from official monitoring programmes.....	54
4.3.2	Assessing the hydraulic connectivity between sampling points and treated fields.....	33	7.3	Interpretation of public monitoring data in groundwater risk assessments.....	55
4.3.3	Application of vulnerability mapping for the identification of potential monitoring sites.....	35	7.4	Factors other than leaching in unsaturated soils that can result in groundwater residues.....	57
4.3.4	Application of vulnerability mapping for setting monitoring sites into context.....	37	8	Appendix 1: Protection goals.....	59
4.4	Interpretation of spatial vulnerability assessments and context setting of monitoring sites.....	39	9	Appendix 2: Examples of study designs for groundwater monitoring studies.....	68
4.5	Generic recommendations for vulnerability assessment and site characterisation in monitoring study design and interpretation.....	41	10	Appendix 3: Catchment surveys.....	79
			11	Appendix 4: List of available methods for vulnerability mapping.....	82
			12	Appendix 5: GIS data available at european level for vulnerability mapping.....	83
			13	Appendix 6: Time of flight modelling methodology.....	83
			14	Appendix 7: Examples of coupling leaching models with hydrogeological models.....	86
			15	Appendix 8: Glossary of terms.....	88
			16	Electronic supplementary material.....	91
			17	References.....	91
