

The cover illustration shows a simplified model of Kaposi's sarcoma-associated herpesvirus (KSHV), which is one of seven viruses currently known to cause cancer. It was discovered by Patrick Moore of Columbia University, NY, USA, who managed to separate human and tumour DNA sequences in a sample of Kaposi's sarcoma tissue taken from an AIDS patient.

## FACTS

Science News ..... 4

### PROFILE OF THE ZEBRA FINCH (*TAENIOPYGIA GUTTATA*)

The seventh part of our series on model organisms showcases a famous bird – the zebra finch. .... 8

### CANCER VIRUSES: AN OVERVIEW

The search for cancer-causing viruses has turned up seven so far. .... 10

## FELLOWS

### NEW PHD PROJECTS, THIRD ROUND 2019
