**The effects of the chain-length distributions of starch molecules on rheological and thermal properties of wheat flour paste**

Zhongwei Zhang, Enpeng Li, Xiangyun Fan, Chuantian Yang, Hongxiang Ma, Robert G. Gilbert

Our study has explained the mechanism of the effects of chain-length distribution of starch molecule on rheological and thermal properties of wheat flour paste by building the correlation between the two bio-synthesis models parameters and rheological fitting models parameters.

**Rheological and microstructural characterization of batters and sponge cakes fortified with pea proteins**

M. Assad Bustillos, C. Jonchère, C. Garnier, A.L. Réguerre, G. Della Valle

Variations of the normalized rheological properties and micrographs of batters (upper row, scale bar 50  $\mu\text{m}$ ) and sponge-cakes (lower row, scale bar 200  $\mu\text{m}$ , and 100  $\mu\text{m}$  for last micrograph at right) as a function of PP concentration (PP particles are stained in red) illustrate the jamming of the foam structure through the creation of PP network. Red dotted lines indicate some characteristic values.
