GENETICS AND BREEDING

Morphometric and mitochondrial variation of *Apis mellifera* L. and its relationship with geographical variables in parts of West and Central Africa

Usman H. Dukku, Stefan Fuchs, Gayaunan Danailu, Bernd Grünwald, Adam Tofilski, Per Kryger, and Marina D. Meixner 296

Mitochondrial and nuclear diversity of colonies of varying origins: contrasting patterns inferred from the intergenic tRNA^{leu}-cox2 region and immune SNPs

Dora Henriques, Ana R. Lopes, Nor Chejanovsky, Anne Dalmon, Mariano Higes, Clara Jabal-Uriel, Yves Le Conte, Maritza Reyes-Carreño, Victoria Soroker, Raquel Martín-Hernández, and M. Alice Pinto 305

BEE MANAGEMENT

The impact of COVID-19 on beekeepers in Texas and Louisiana

Pierre Lau, Alexandria N. Payne, Omar Khan, Mary Beth Buchman, and Juliana Rangel 309

A scientific note on in-hive positioning determines small hive beetle trap efficacy

Michael N. K. Muturi, Anna Papach, H. Michael G. Lattorff, and Peter Neumann 315

An integrated system for field studies on honey bees

Matthew J. Allan and Robin R. Dean 317

Formic acid combined with oxalic acid to boost the acaricide efficacy against *Varroa destructor* in *Apis mellifera*

Marco Pietropaoli and Giovanni Formato 320

Sporicidal evaluation of different substances against *Nosema ceranae* for surface disinfection

Cristina Rodríguez-García, Mariano Higes, and Raquel Martín-Hernández 329

Identification of honey bee (*Apis mellifera*) larvae in the hive with faster R-CNN for royal jelly production

Huseyin Gunes and Ahmet Gungormus 338

PATHOLOGY AND PARASITOLOGY

Coexistence between selected pathogens in honey bee workers

Maria Michalczyk, Rajmund Sokół, and Agata Banczerz-Kisiel 346

Live and dead qPCR detection demonstrates that feeding of *Nosema ceranae* results in infection in the honey bee but not the bumble bee

Jozef J. M. van der Steen, Marc J. A. Hendriks, Anne D. van Diepeningen, Marga P. E. van Gent-Pelzer, and Theo A. J. van der Lee 352

The smell of sex: cuticular hydrocarbons of adult small hive beetles, *Aethina tumida* (Coleoptera: Nitidulidae)

Anna Papach, Rammohan Balusu, Geoffrey R. Williams, Henry Y. Fadamiro, and Peter Neumann 365

Prevalence of nosemosis in honey bees (*Apis mellifera* L., 1758) of the Hatay province in Turkey

Aykut Zerek, Mehmet Yaman, and Bilal Dik 368

Preliminary trials on effects of lithium salts on *Varroa destructor*, honey and wax matrices

Zoran Stanimirovic, Uros Glavinic, Nemanja M. Jovanovic, Marko Ristanic, Dušanka Milojković-Opsenica, Jelena Mutic, and Jevrosima Stevanovic 375

HIVE PRODUCTS SCIENCE

Diversity of aerobic spore-forming bacteria isolated from fresh bee pollen intended for human consumption in Argentina

Adriana M. Alippi, Leticia A. Fernández, and Ana C. López

392

Determination of inorganic elements in geopropolis samples by inductively coupled plasma optical emission spectrometry

Jean Sanger Siqueira, Cleide Samara Tavares Mescouto, Michelle de Souza Lemos, João Batista Pereira Junior, Giorgio C. Venturieri, Heronides Adonias Dantas Filho, and Kelly das Graças Fernandes Dantas

400

Thermoanalytical investigations of honey produced by *Trigona* species using differential scanning calorimetry (DSC)

Yaneth Cardona Rodríguez, Alexandra Torres, and Wolfgang Hoffmann

408

ECOLOGY AND CONSERVATION

Assessment of connectivity between core habitats of the red dwarf honey bees in Iran based on climate and environmental niche modeling

Taghi Ghassemi-Khademi, Rasoul Khosravi, Saber Sadeghi, and Irfan Kandemir

416

External activity of the stingless bee *Melipona fasciculata* (Smith) kept in the Brazilian Cerrado

Paulo Vitor Divino Xavier de Freitas, Igor Eli da Silva, Patrícia Faquinello, Rodrigo Alves Zanata, Emanuel Arnhold, and Carlos de Melo e Silva-Neto

429

PHYSIOLOGY, BIOCHEMISTRY, AND CHEMICAL ECOLOGY

Experimental *Nosema ceranae* infection is associated with microbiome changes in the midguts of four species of *Apis* (honey bees)

Sanchai Naree, James D. Ellis, Mark Eric Benbow, and Guntima Suwannapong

435

Exposure of *Apis mellifera* to anti-*Varroa destructor* formic acid treatment induces significant proteomic alterations

Rachel Ward, Mary F. Coffey, and Kevin Kavanagh

448
