|----|---|-----|
| | VII. INTRAVENOUS IMMUNOGLOBULIN (IVIg) AS AN INHIBITOR OF TUMOUR GROWTH: FROM AUTOIMMUNITY TO CANCER (<i>Pnina Fishman and Yehuda Shoenfeld</i>) | 93 |
| 47 | Summary | 93 |
| 47 | Introduction | 93 |
| 50 | Common therapies for cancer and autoimmunity | 95 |
| | Harnessing autoreactivity for cancer treatment | 97 |
| 51 | Utilising IVIg, a common treatment in autoimmunity, for cancer therapy | 101 |
| 52 | Literature | 104 |
| 53 | | |
| 54 | VIII. THE POSSIBLE ROLE OF THE ID-NETWORK IN THE DEVELOPMENT OF LATE ONSET GRAFT-VERSUS-HOST DISEASE AFTER BONE MARROW TRANSPLANTATION: IMPORTANCE OF THE MICROFLORA OF THE BONE MARROW RECIPIENT (<i>Peter J. Heidt and Dirk van der Waaij</i>) | 109 |
| 55 | Summary | 109 |
| 58 | Introduction | 109 |
| | Microflora and graft-versus-host disease | 110 |
| 67 | Hypothesis | 112 |
| 67 | Literature | 113 |
| 68 | | |
| 69 | IX. THE IMPORTANCE OF DONOR MICROFLORA IN LATE-ONSET GRAFT VERSUS HOST DISEASE (<i>Dick Veenendaal</i>) | 115 |
| 73 | Summary | 115 |
| 74 | Introduction | 115 |
| 75 | History | 116 |
| 77 | Donor microflora and LO-GvHD | 118 |
| 78 | Interactions between immune system and microflora | 119 |
| 80 | Matching donor and recipient microbial flora and LO-GvHD | 122 |
| | Perspectives in microflora associated GvHD | 123 |
| | Acknowledgements | 124 |
| 85 | Literature | 124 |
| 85 | | |
| 85 | | |
| 87 | | |
| 88 | | |
| 89 | | |
