X.	NUTRITION AND RESISTANCE TO DISEASE (<i>Stig Bengmark</i>)	117
	Epidemic of chronic and drug-related diseases	117
	Are all diseases infectious?	118
	Paradoxical malnutrition common in Western countries	119
	Less saturated fat, more fibre and lactic acid bacteria	120
	Palaeolithic forefathers consumed large amounts of lactic acid bacteria	120
	Fibre-fermenting lactic acid bacteria are important	121
	Not all lactic acid bacteria survive gastro-intestinal passage	121
	Two principally different digestion systems	122
	Microbial dysbalance and reduced resistance to infection	122
	Homeostasis/equilibrium in body systems are important	124
	Some lactic acid bacteria promote apoptosis	125
	Some lactic acid bacteria activate macrophages	125
	Cytokine release influenced by lactic acid bacteria	126
	Strain-related response to lactic acid bacteria	126
	Lactic acid bacteria induce gut Ig-A production	127
	Strong clinical effects of lactic acid bacteria in various diseases	128
	Immunological effects more important than nutritional	129
	Literature	129
XI.	MICROBIAL TRANSLOCATION IN THERMAL INJURY (<i>J. Wesley Alexander</i>)	135
	Summary	135
	Introduction	135
	Models and quantification of translocation after burn injury	136
	How do organisms translocate?	137
	The relationship of translocation to the hypermetabolic response after burn injury	138
	Effects of treatment on translocation and outcome following burn injury	139
	Clinical observations	139
	Conclusions	140
	Literature	140

XII.	OLD HERB MINUTES (<i>Nico A. B.</i>)	
	Introduction
